Skeletal System - Cells, Tissues, and Bone Shapes

Skeletal System - Cells, Tissues, and Bone Shapes Class Outline

5 minutes Attendance, Breath of Arrival, and Reminders

10 minutes Lecture:

25 minutes Lecture:

15 minutes Active study skills:

60 minutes Total

Skeletal System - Cells, Tissues, and Bone Shapes Class Reminders

Assignments:

■ 17a Review Questions (A: 131-140)

Quizzes and Exams:

- 13b Kinesiology Quiz
 - Tibialis anterior, fibularis longus and brevis, quads, rectus abdominis, and pec. major
- 17b Kinesiology Quiz
- 17a Quiz
- 19a Quiz
- 21a Exam

Preparation for upcoming classes:

- 14a H&H: Compassionate Care for All People
 - Trail Guide: biceps brachii and coracobrachialis
 - Packet H: 55-64
- 14b Swedish: Technique Review and Practice Feet, Anterior Lower Body, and Abs
 - Packet F: 45-46, and 58

Classroom Rules

Punctuality - everybody's time is precious

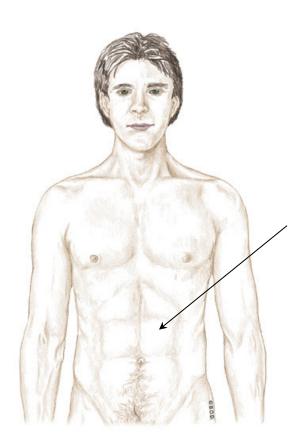

- Be ready to learn at the start of class; we'll have you out of here on time
- Tardiness: arriving late, returning late after breaks, leaving during class, leaving early

The following are not allowed:

- Bare feet
- Side talking
- Lying down
- Inappropriate clothing
- Food or drink except water
- Phones that are visible in the classroom, bathrooms, or internship

You will receive one verbal warning, then you'll have to leave the room.

Rectus Abdominis Trail Guide, Page 210

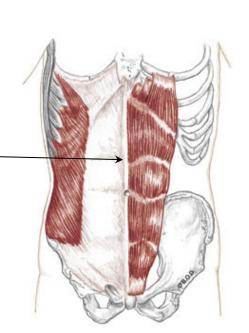

Anterior View

Rectus abdominis

has multiple superficial bellies that are often referred to as a "washboard belly".

The abdominals as a group of muscles consist of four muscles:

- Rectus abdominis
- External oblique
- Internal oblique
- Transversus abdominis

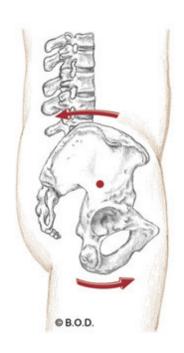

Anterior View

When do you use your rectus abdominis?

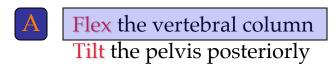

Actions of the Rectus Abdominis

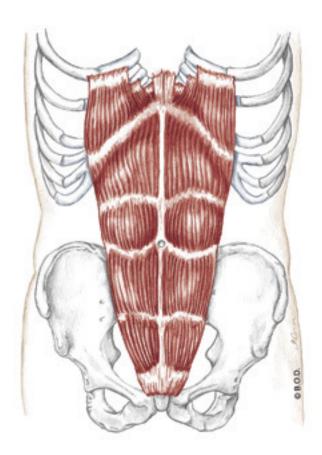

Flexion of the vertebral column

Posterior pelvic tilt

- Pubic crest
 Pubic symphysis
- Cartilage of 5th, 6th, and 7th ribs Xiphoid process

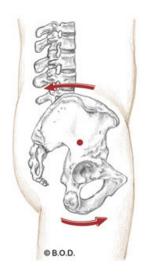

Anterior View

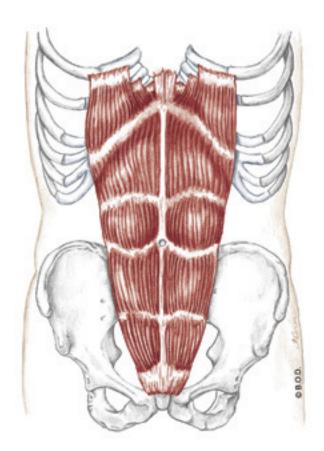

Flex the vertebral column
Tilt the pelvis posteriorly

Pubic crest
Pubic symphysis

Cartilage of 5th, 6th, and 7th ribs Xiphoid process

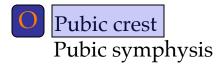

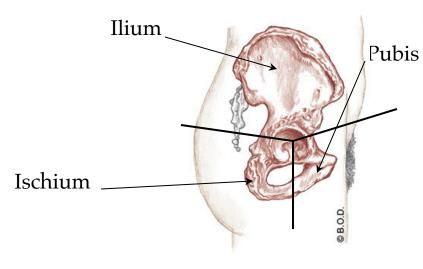

Anterior View

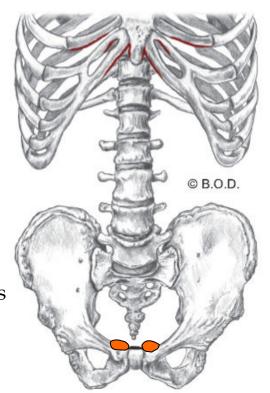

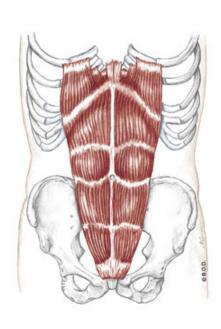

Flex the vertebral column
Tilt the pelvis posteriorly

Cartilage of 5th, 6th, and 7th ribs Xiphoid process

Anterior View

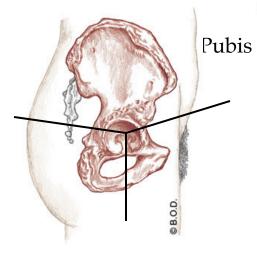

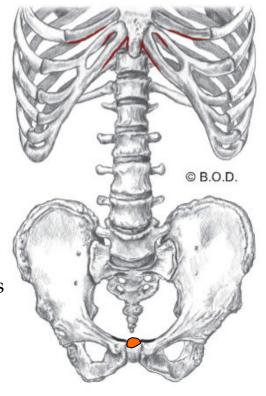

Flex the vertebral column
Tilt the pelvis posteriorly

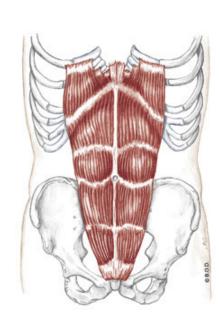

Pubic crest
Pubic symphysis

Cartilage of 5th, 6th, and 7th ribs Xiphoid process

Ilium

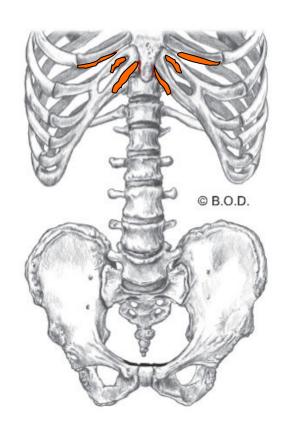

Ischium

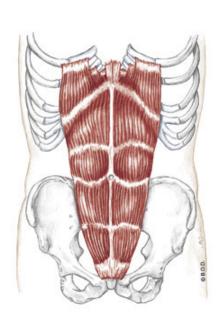

Anterior View

Flex the vertebral column
Tilt the pelvis posteriorly

- Pubic crest
 Pubic symphysis
- Cartilage of 5th, 6th, and 7th ribs
 Xiphoid process

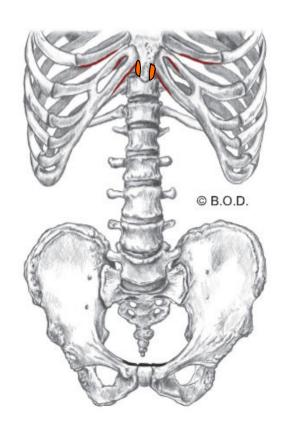

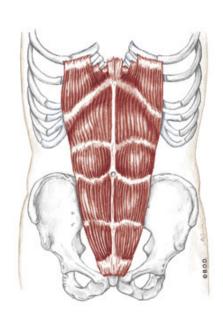

Flex the vertebral column
Tilt the pelvis posteriorly

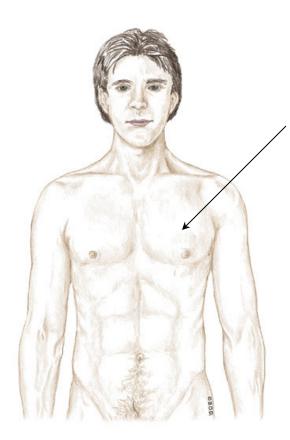

- Pubic crest
 Pubic symphysis
- Cartilage of 5th, 6th, and 7th ribs

 Xiphoid process

Pectoralis Major Trail Guide, Page 89

Pectoralis Major

is a broad, powerful muscle located on the chest.

Pec major consists of three segments:

- Clavicular (clavicle)
- Sternal (sternum)
- Costal (rib cartilage)

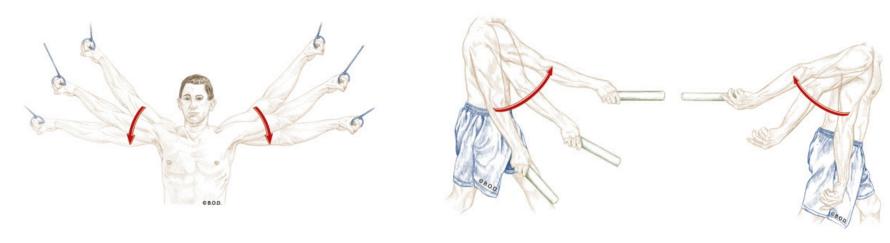

Pec major is also an antagonist to itself: Upper fibers flex the glenohumeral joint. Lower fibers extend the glenohumeral joint.

Anterior View

Anterior View

When do you use your pecs?

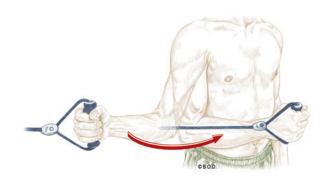

Actions of the Pectoralis Major

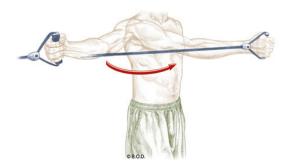

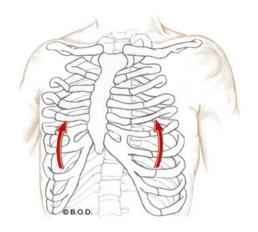

Adduct the glenohumeral joint

Flex the glenohumeral joint

Extend the glenohumeral joint

Medially rotate the glenohumeral joint

Horizontally adduct the glenohumeral joint

Assist to elevate the thorax during forced inhalation

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint
Assist to elevate the thorax during forced inhalation (with the arm fixed)

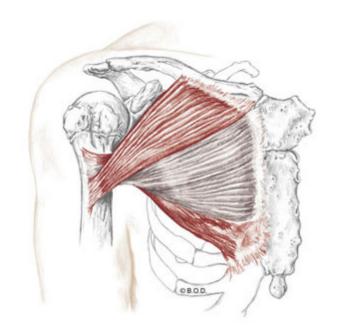

Upper fibers:

Flex the glenohumeral joint

Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle Sternum Cartilage of ribs 1-6
- Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

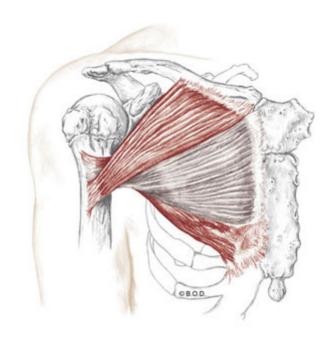

Assist to elevate the thorax during forced inhalation (with the arm fixed)

Upper fibers:

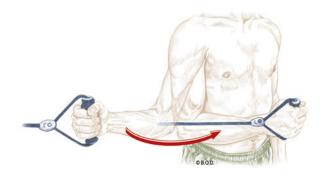

Flex the glenohumeral joint Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle Sternum Cartilage of ribs 1-6
- Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

Assist to elevate the thorax during forced

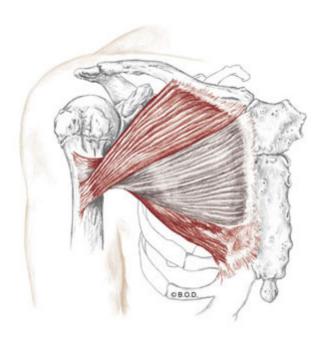

Assist to **elevate** the thorax during forced inhalation (with the arm fixed)

Upper fibers:

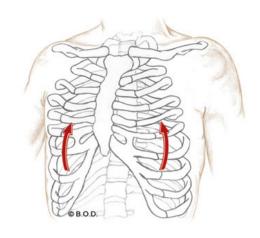

Flex the glenohumeral joint Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle Sternum Cartilage of ribs 1-6
- Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

Assist to elevate the thorax during forced inhalation (with the arm fixed)

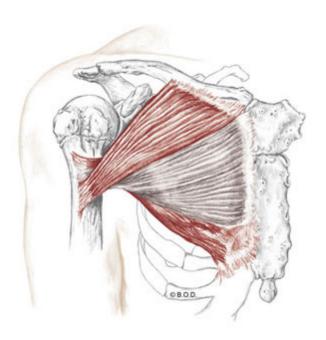

Upper fibers:

Flex the glenohumeral joint

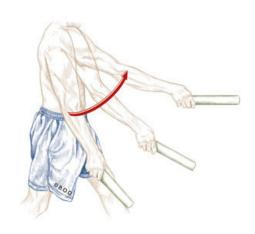

Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle Sternum Cartilage of ribs 1-6
- The Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

Assist to elevate the thorax during forced inhalation (with the arm fixed)

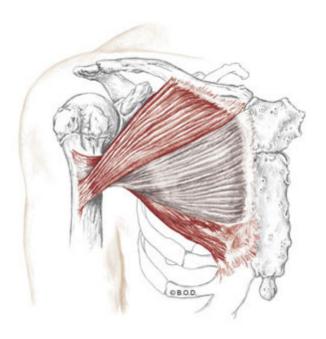

Upper fibers:

Flex the glenohumeral joint

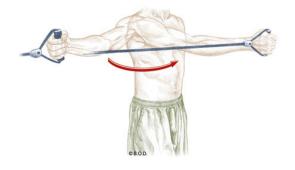

Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle Sternum Cartilage of ribs 1-6
- The Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

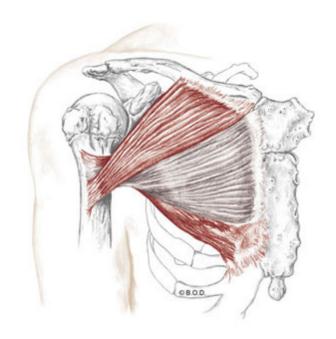

Assist to elevate the thorax during forced inhalation (with the arm fixed)

Upper fibers:

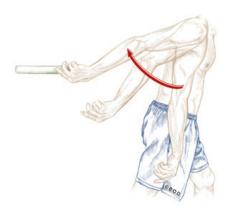

Flex the glenohumeral joint Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle Sternum Cartilage of ribs 1-6
- The Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

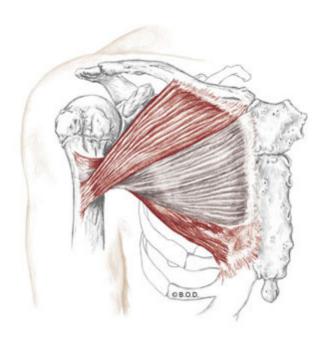

Assist to elevate the thorax during forced inhalation (with the arm fixed)

Upper fibers:

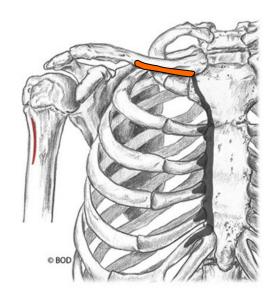

Flex the glenohumeral joint Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle
 Sternum
 Cartilage of ribs 1-6
- The Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

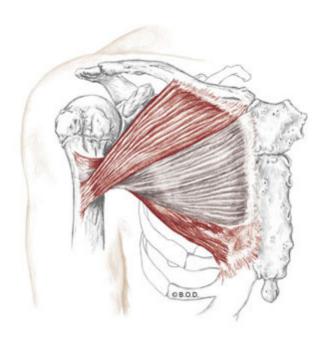

Assist to elevate the thorax during forced inhalation (with the arm fixed)

Upper fibers:

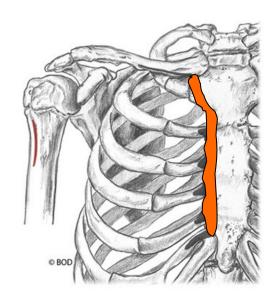

Flex the glenohumeral joint Horizontally adduct the glenohumeral joint

Lower fibers:

- Medial half of the clavicle
 Sternum
 Cartilage of ribs 1-6
- The Crest of greater tubercle of humerus

Anterior View

All fibers:

Adduct the glenohumeral joint

Medially rotate the glenohumeral joint

Assist to elevate the thorax during forced inhalation (with the arm fixed)

Upper fibers:

Flex the glenohumeral joint

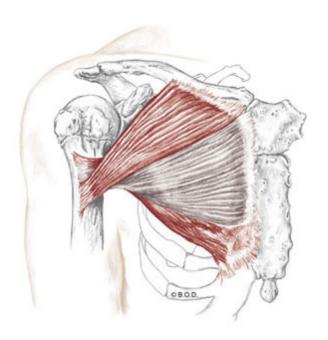

Horizontally adduct the glenohumeral joint

Lower fibers:

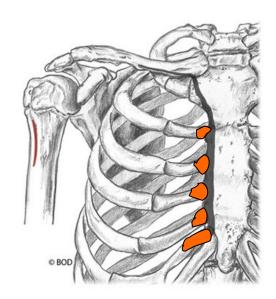

Extend the glenohumeral joint

Medial half of the clavicle Sternum
Cartilage of ribs 1-6

The Crest of greater tubercle of humerus

Skeletal System - Cells, Tissues, and Bone Shapes E-15

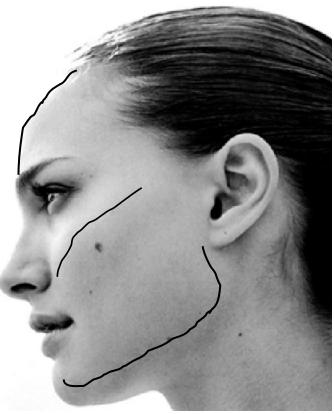

Bones The structural foundation of our bodies

Bones The structural foundation of our bodies

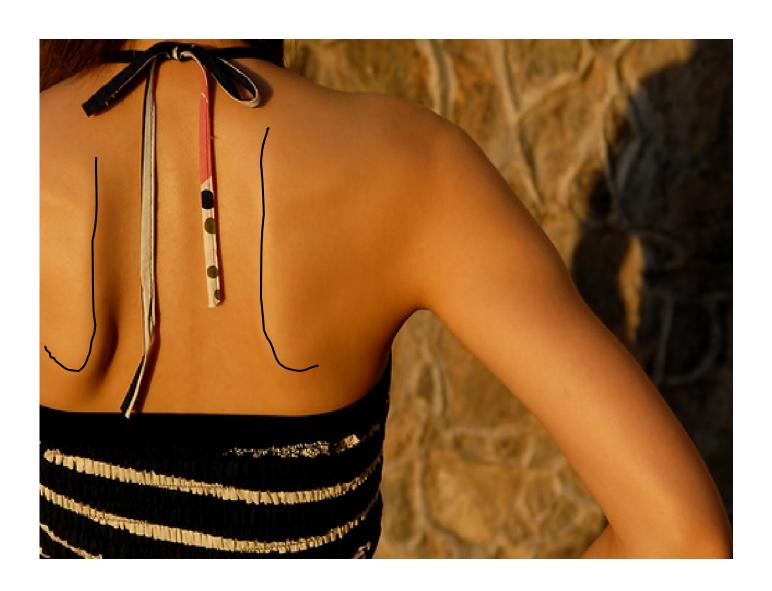

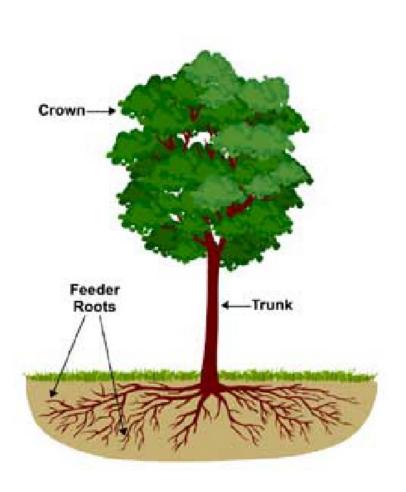

Contacting bones with confidence

Bones acts as handles for moving the body

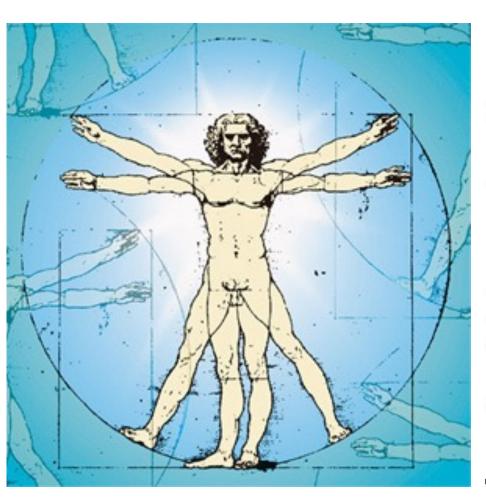

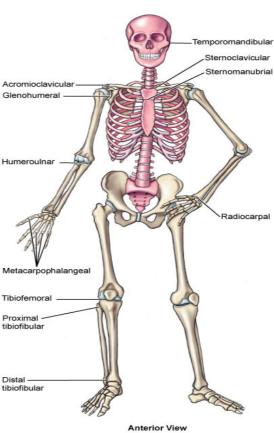

Living Tree versus Telephone Pole

Living Bone versus Human Skeleton

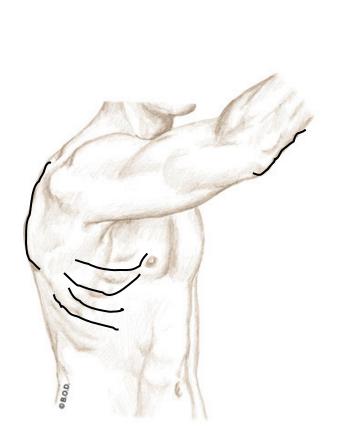

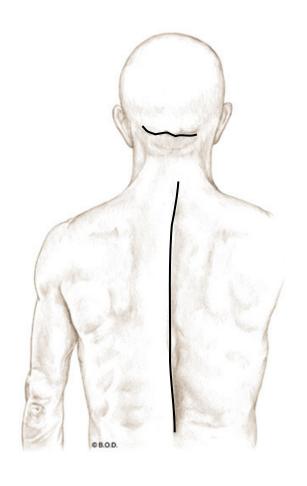

From Herlihy B: The human body in health and illness, ed 4, St. Louis, 2011, Saunders.

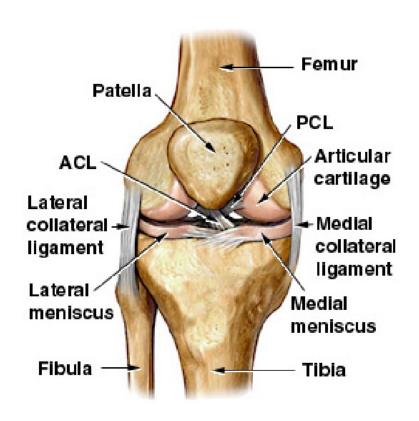

Fig. 21-40. Select joints.

Bony landmarks are used to locate other structures

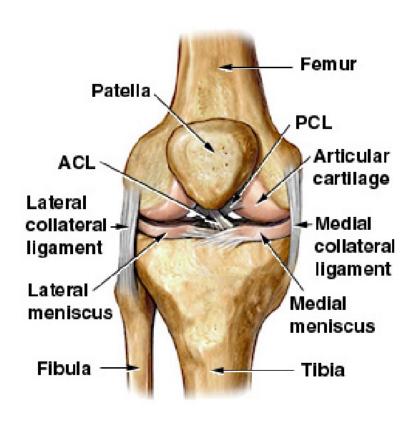

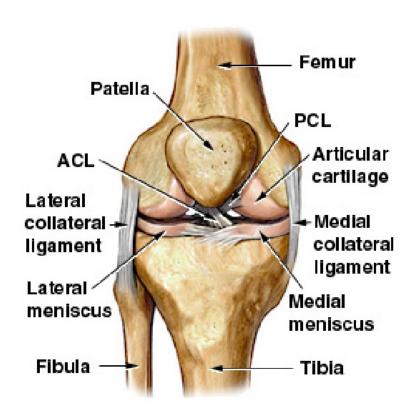

Bones Connective tissue that consists of compact bone, spongy bone, collagenous fibers, and mineral salts.

Joints (AKA: articulation or arthrosis) Where bones come together or join.

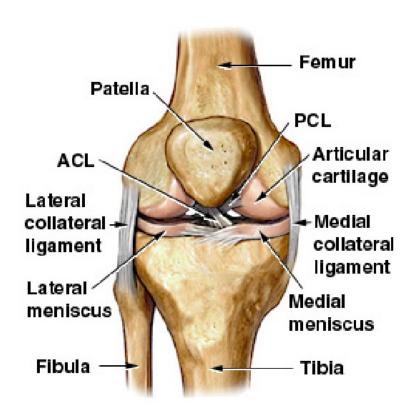

Cartilage Avascular, tough, protective connective tissue found in the thorax, joints, and some rigid tubes of the body such as the trachea and larynx.

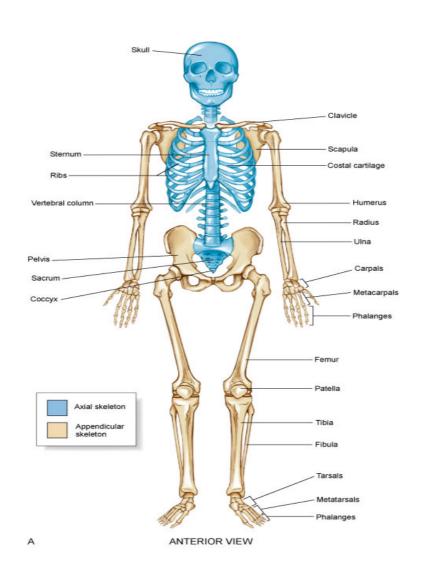

Anatomy

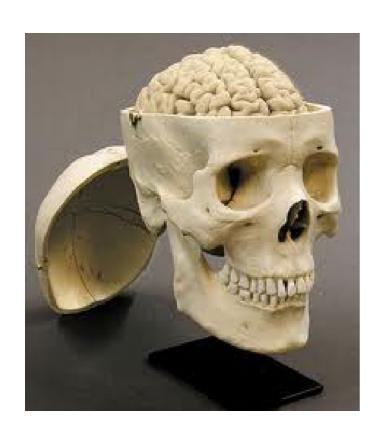

Ligaments Dense regular connective tissue that attaches bones to one another.

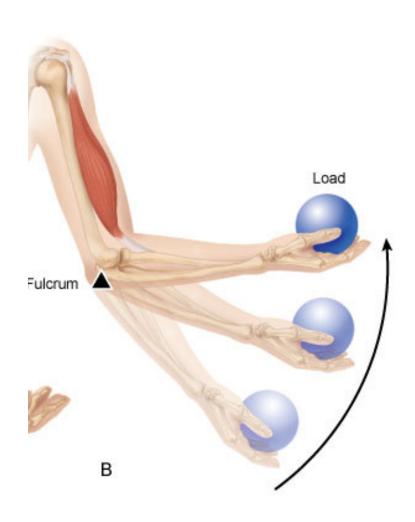

Support Supports the body through a <u>bony</u> framework.

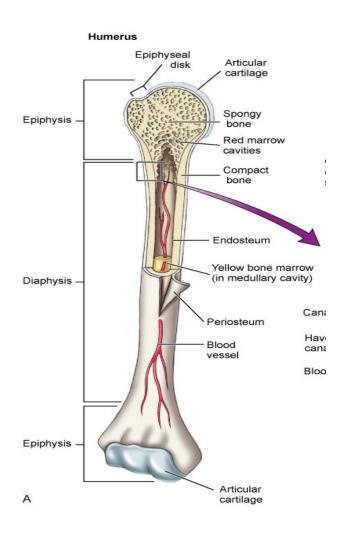

Protection Protects <u>vital</u> organs.

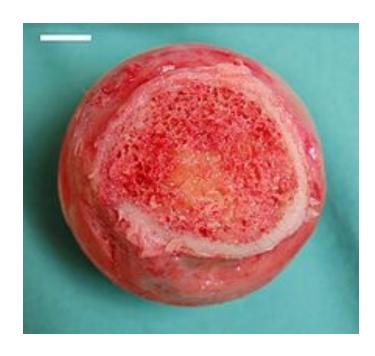

Movement Contracting muscles pull on bones to cause movements at joints.

Blood cell production (AKA: hemopoiesis) Blood cells are produced in the red marrow of certain bones, especially long bones.

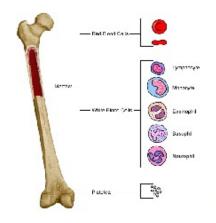

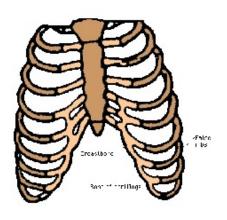

Locations of red bone marrow:

humerus femur pelvis sternum / ribs scapula cranial bones

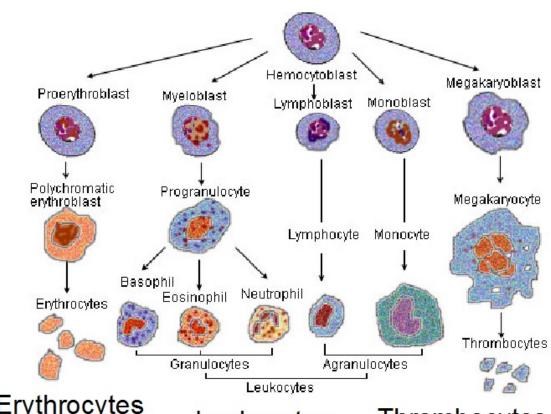

All mature blood cells begin as stem cells.

They mature to become one of the following:

- 1. More stem cells
- 2. Erythrocytes
- 3. Leukocytes
- 4. Thrombocytes

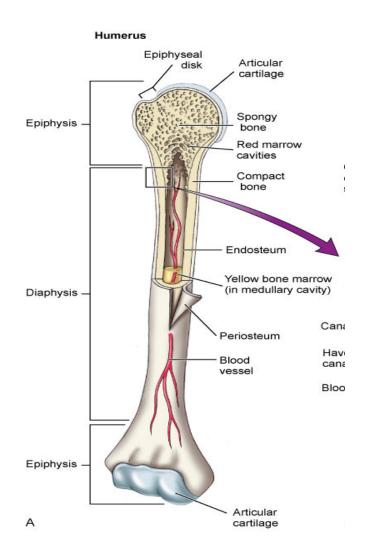

Erythrocytes

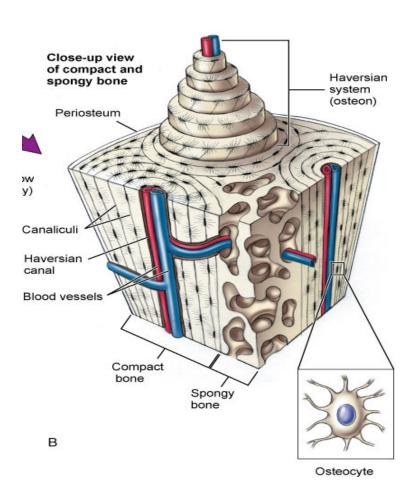

Leukocytes

Thrombocytes

Fat storage Fats are stored in <u>yellow</u> bone marrow.

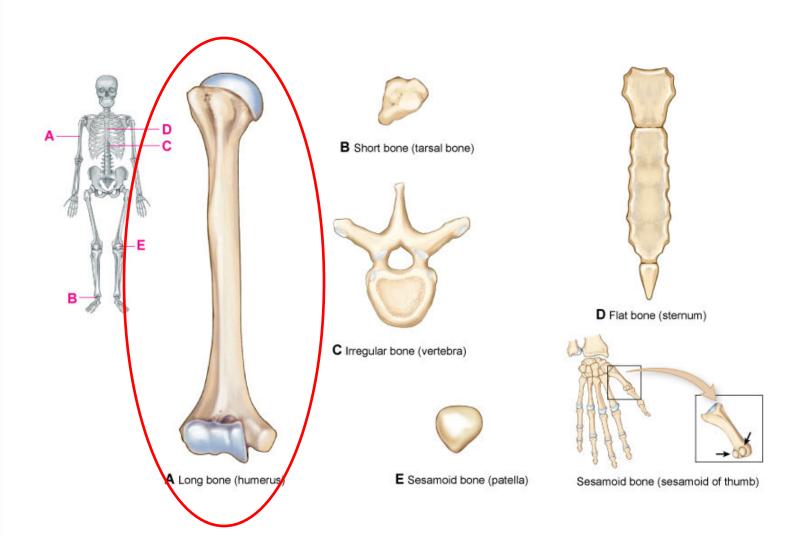

Mineral storage Vital minerals and mineral compounds are stored in bone.

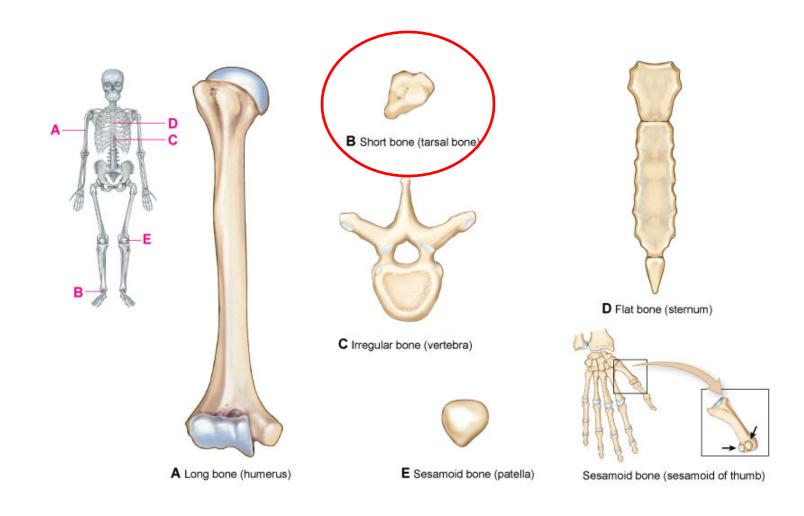

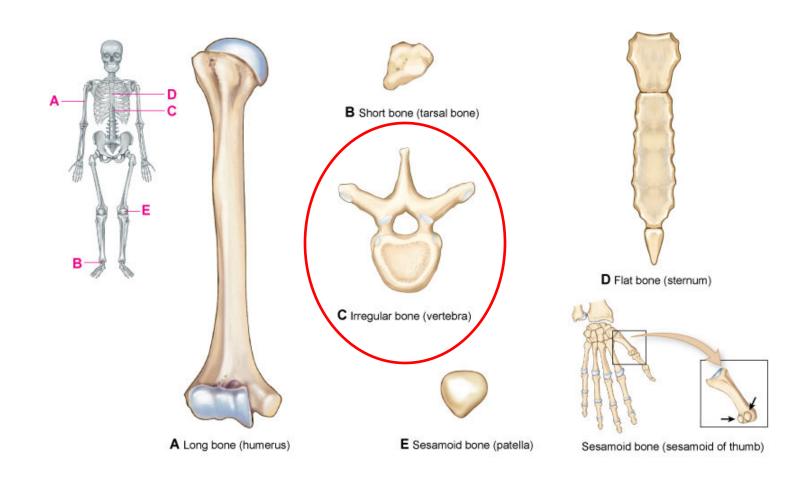

Long Longer than they are <u>wide</u>. Examples: *humerus*, femur, and tibia.

Short Small, <u>cube</u> -shaped, and contain multiple articulating surfaces. Examples: carpals and *tarsals*.

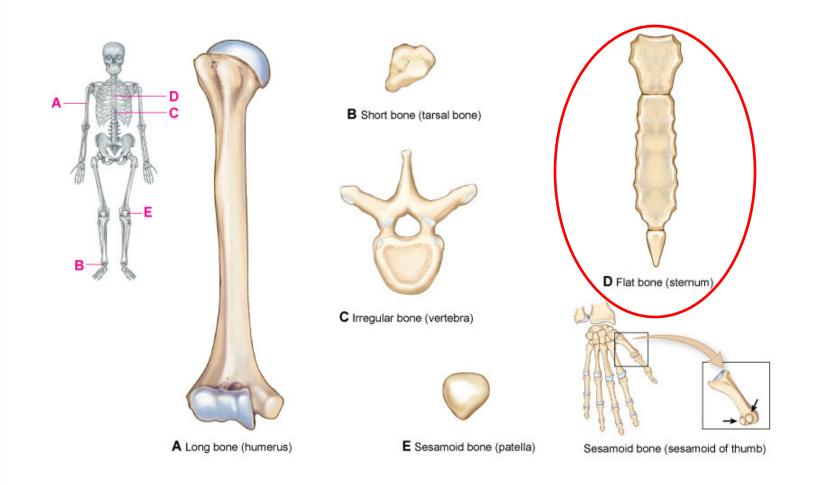

Irregular Catch-all category for bone that do not fit in other categories. Examples: facial bones and *vertebrae*.

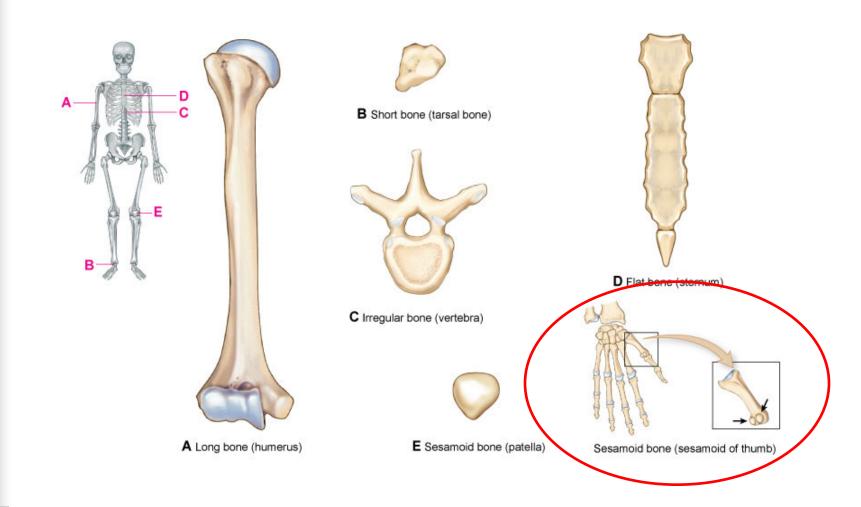

Flat Possess a broad, flat surface for muscle <u>attachment</u> or <u>protection</u> of underlying organs.

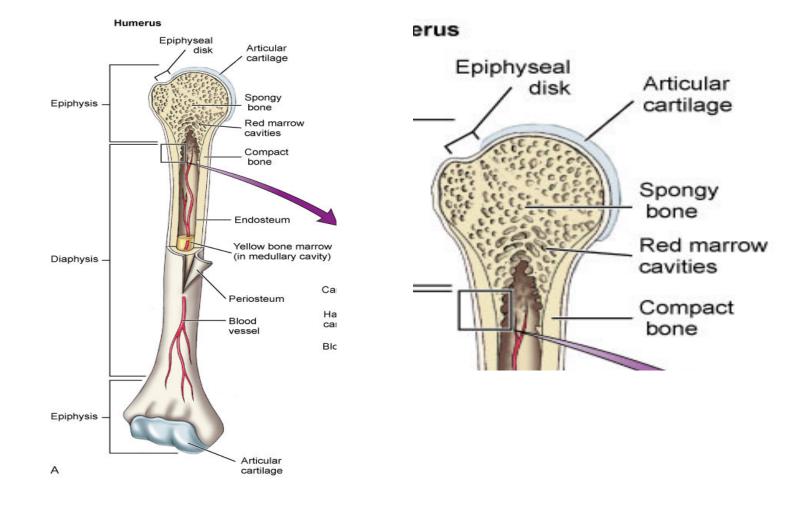

Examples: *sternum*, scapula, ribs, and most cranial bones.

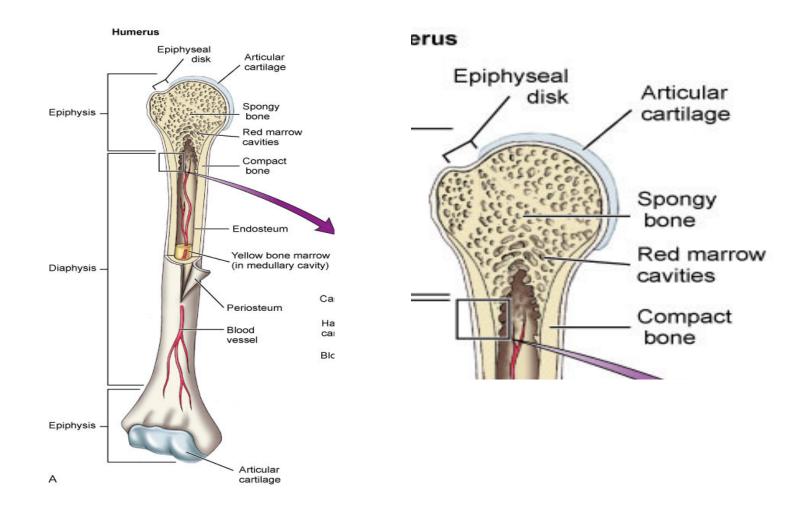

Sesamoid Small, round bones that are embedded in certain <u>tendons</u>. Example: *patella*.

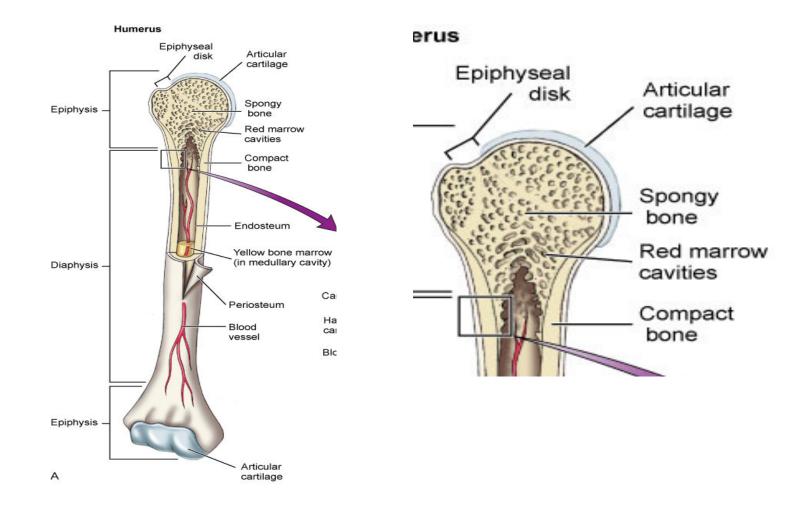

Compact Forms the hard <u>outer</u> shell of all bones and a small portion of the shaft of long bones. Provides protection, support, and resistance to stress of weight and movement.

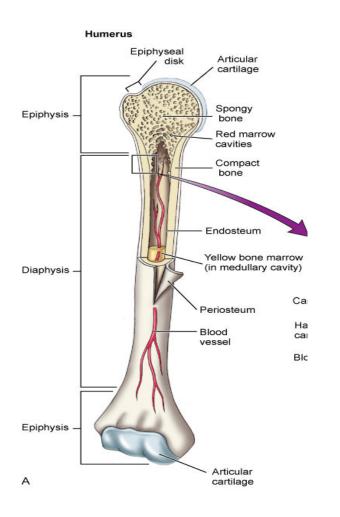

Spongy (AKA: cancelleous) A <u>lattice</u> of thin beams of bone within bones. Lightens the bone and is filled with red bone marrow.

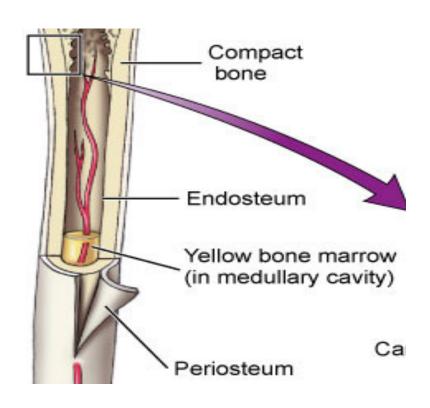

Red bone marrow Blood <u>forming</u> cells found in flat and long bones. Produce red blood cells, platelets, and white blood cells.

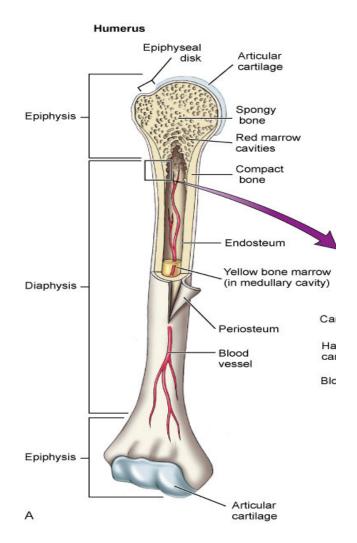

Yellow bone marrow Adipose fibrous connective tissue that contains mainly <u>fat</u> cells and is found in the medullary cavity.

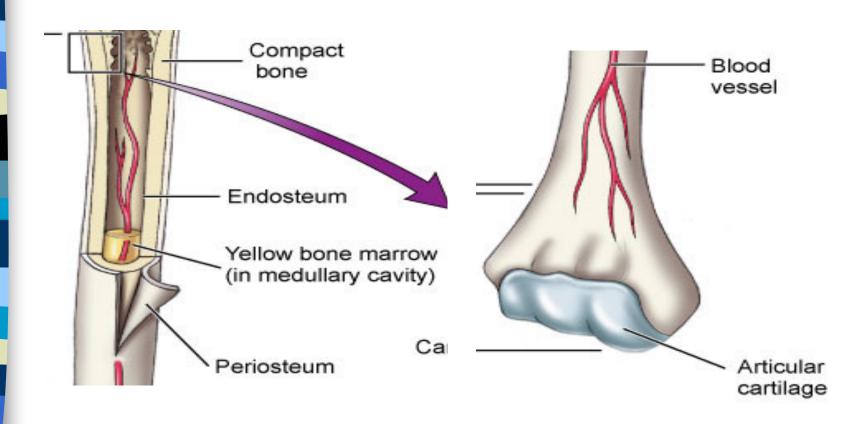

Diaphysis Cylindrical <u>shaft</u> of a long bone.Epiphysis The <u>ends</u> of a long bone.

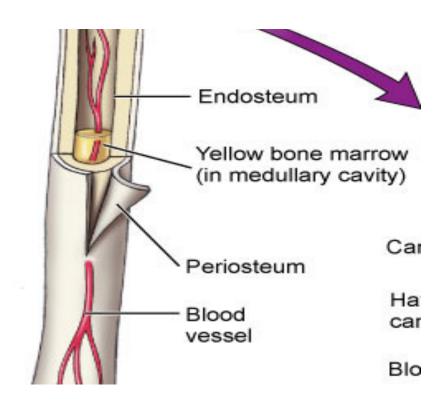

Articular cartilage Hyaline cartilage covering an epiphysis.

Medullary cavity Hollow space within the diaphysis.

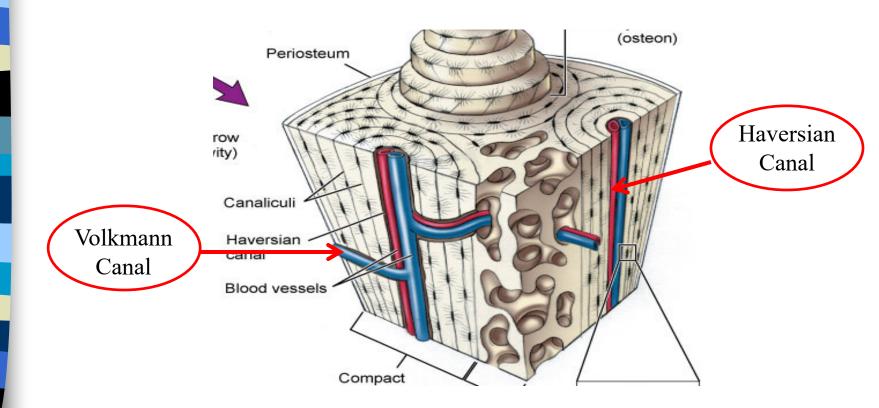

Periosteum Fibrous sheath surrounding the bone's shaft containing blood and lymphatic vessels, nerves, and bone-forming cells for growth and fracture healing.

Endosteum Lining of the medullary cavity.

Haversian canal Vascular canal that runs <u>longitudinally</u> through a bone.

Volkmann canal Vascular canal that runs <u>horizontally</u> through a bone, connecting Haversian canals.

Bone Remodeling

Bone Remodeling

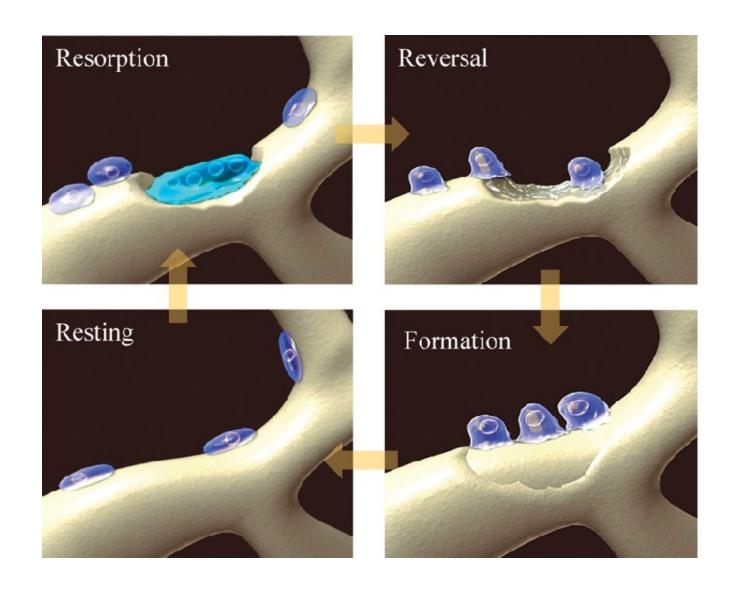

Osteoblasts Bone-<u>forming</u> cells.

Osteoclasts Bone-<u>destroying</u> cells.

Osteocytes Mature bone cell.

Osteoblasts Bone-forming cells.

Osteoclasts Bone-destroying cells.
